POSITIVE CRANKCASE VENTILATING SYSTEM

THIS BULLETIN CANCELS AND SUPERSEDES PLYMOUTH SERVICE INFORMATION BULLETIN NO. 62-88 DATED AUGUST 29, 1962. PLEASE REMOVE THIS BULLETIN FROM YOUR FILE AND INSERT THIS REVISION.

All 1963 Chrysler built passenger cars will be equipped with a positive crankcase ventilating system. This equipment was also used on many 1962 model vehicles as special equipment.

Two different positive crankcase ventilating valves are used in production.

Part No. 2406212 is used on Imperial, Chrysler and Plymouths.
Part No. 2406211 is used on the Valiant.

The Valiant valve can be quickly identified by removing the assembly from the valve cover and observing the circular raised section on the end of the valve. See illustration. The end of the valve used on Plymouth, Chrysler and Imperial is perfectly smooth.

The metered orifice in the Valiant valve, Part No. 2406211 is approximately 5/64". The metered orifice in the Plymouth, Chrysler and Imperial valve Part No. 2406212 is approximately 7/64".

To provide proper functioning of this equipment, it is important that periodic inspection and servicing be performed either at the semi-annual or 8,000 mile servicing, whichever may occur first. Refer to service manual for instructions.

However, under certain severe operating conditions, such as police, fleet and taxicab service, it may be advisable to service this assembly at every engine oil change. An adequate stock of cleaned spare flow control valves would minimize servicing time. The original valves could be cleaned at a later date.
